

Company Profile

Highland Energy Systems was established in 2007 by its parent company Highland Communications, Inc., a skilled communications and tower construction company, Highland Energy Systems is establishing itself as a company dedicated to the idea of sustainability in the Northwest United States. A major goal of the company is to promote RE to the communications industry and the company has completed designs for both off and on grid systems. Under the direction of the owners Frank and Teresa Campbell, the company has built its own communications tower in Skagit County, Washington, complete with a wind generator and a solar array, which has helped to generate the interest of the communications industry in renewable energy. The tower is capable of hosting four cellular carriers on its height of 165 feet.”

Highland Communications' Power Tower near Burlington, Washington.

Exceptional customer service and the ability to design and install renewable energy systems is the result of a team of seasoned workers who come from technical backgrounds and communications tower construction. This highly skilled team is capable of building a turn-key renewable energy system from the ground up. Highland Energy Systems works with the local energy provider and the State of Washington to guide the customer with the necessary paperwork in order to benefit from incentives and have a smooth transition to grid-tie applications.
